

# **Our Green Policy**

**We are committed to good environmental practice and aim to reduce the environmental impact of all our business activities.**

**We will ensure that our business operations meet the minimum requirements set by environmental law and that it fulfils its legal Duty of Care requirements for waste disposal.**

**We are committed to continual environmental improvement in our business operations and we aim to train all our staff in accordance with our environmental policy.**

**We will maintain a respect for natural resources through conservation and material reuse and recovery, to purchase recycled materials and use recyclable packaging and other materials wherever possible.**

**We will ensure the responsible use of energy throughout the business including energy conservation and energy efficiency. To consider safer energy sources and where feasible give preference to renewable over non-renewable energy sources.**

**We will encourage our holiday guests to adopt greener practices and improve their environmental awareness in line with our environmental policy, and similarly encourage and work with our holiday property owners to achieve higher levels of good environmental practice.**

**We will aim to buy environmentally friendly produce and products for use in the business and to encourage our suppliers to operate good environmental practices and improve their own environmental awareness.**

**We will aim to make contact with the community and other businesses to encourage additional environmental measures.**

**We will support and encourage organizations that work towards the conservation of our natural landscape.**
